Das Gerät muß auch nach der Reparatur den Sicherheitsbestimmungen nach DIN/IEC 65 VDE 0860 entsprechen.

MW Abstimmung:

Das MW-Raster kann für USA von 9 kHz auf 10 kHz geändert werden. MW-Taste halten und Gerät einschalten = 10 kHz-Raster, wiederholen = 9 kHz-Raster. Die USA-Ausführung ist ab Werk auf 10 kHz-Raster eingestellt. Im Display erscheint für ca. 2 sec. ein U für USA oder ein E für Europa.

FM Abstimmung:

Das Suchlauffenster kann für USA von 15 kHz auf 25 kHz umgeschaltet werden. FM-Taste halten und Gerät einschalten = 25 kHz-Fenster, wiederholen = 15 kHz-Fenster. Die USA-Ausführung ist ab Werk auf 25 kHz-Fenster eingestellt. Im Display erscheint für ca. 2 sec. ein U für USA oder ein E für Europa.

Ausbauhinweise

Gehäuseoberteil

- 6 Schrauben **a** herausschrauben.

Frontblende

- 3 Schrauben **b** herausschrauben.
- Steckverbindungen lösen.

Display und Displayplatte

- 4 Schrauben **c** herausschrauben. Achtung ! Abstandsrollen.

Displayplatte

- Display und Displayplatte ausbauen.
- Schraube **d** herausschrauben.
- Platte vorsichtig aus den Führungen ziehen, da der Flexprint auf der Platte aufgeklebt ist. Im Reparaturfall muß das Display komplett gewechselt werden.

Lampenplatte

- Lampe 90° drehen und herausnehmen.
- Rastnase **e** ausrasten und Lampenplatte aus den Führungen ziehen.
- Beim Einbau darauf achten, daß die Leiterseite oben ist.

Bedienplatten

- Frontblende ausbauen.
- Display und Displayplatte ausbauen.
- 15 Schrauben **f** lösen.

Hauptplatte

- 5 Schrauben **g** herausschrauben.
- 6 Schrauben **h** herausschrauben.

Netzteilplatte

- 3 Schrauben **i** herausschrauben.

Netzschalterplatte

- Netzschalter ausrasten und Taste abziehen.
- Frontblende abschrauben.
- 2 Schrauben **j** herausschrauben.
- Netzschalter und -Platte mit Halterung herausnehmen.

Trafo

- 4 Schrauben **k** herausschrauben.

Halterung für Speicherbatterien

- 2 Schrauben **m** herausschrauben.

After the unit has been repaired, it should still meet the DIN/IEC 65 VDE 0860 safety requirements.

MW Tuning:

The MW channel pattern can be changed from 9 kHz steps to 10 kHz steps for US version. Push the MW button and switch on the unit = 10 kHz steps, repeat = 9 kHz steps. The US version is set to 10 kHz steps by the factory. For about two seconds an U for US or an E for Europe lights up in the Display.

FM Tuning:

The FM selfseek pattern can be changed from 15 kHz steps to 25 kHz steps for US version. Push the FM button and switch on the unit = 25 kHz steps, repeat = 15 kHz steps. The US version is set to 25 kHz steps by the factory. For about two seconds an U for US or an E for Europe lights up in the Display.

Disassembly Instructions

Cabinet top

- Undo the 6 screws **a**.

Front panel

- Unscrew the 3 screws **b**.
- Disconnect the plug-in connections.

Display and Display board

- Unscrew the 4 screws **c**. Take care of spacers!

Display board

- Remove the display and the display board.
- Undo screw **d**.
- Withdraw the board carefully from the guides because the flexible printed circuit board is glued to it. If repair is necessary, the complete display must be replaced.

Lamp circuit board

- Turn the lamp through 90° and remove it.
- Unlock the latch **e** and withdraw the lamp board from the guides.
- When refitting the board take care that the printed side faces upwards.

Keyboard circuit boards

- Remove the front panel.
- Remove the display and the display board.
- Loosen the 15 screws **f**.

Main circuit board

- Unscrew the 5 screws **g**.
- Undo 6 screws **h**.

Mains board

- Unscrew the 3 screws **i**.

Mains switch and board

- Release the power switch and remove the button.
- Undo 2 screws **j**.
- Remove the mains switch and board together with the holding device.

Transformer

- Undo the 4 screws **k**.

Holding device for storage batteries

- Undo the 2 screws **m**.

Sicherheitsvorschriften / Safety requirements / Prescrizioni de sicurezza / Prescriptions de sécurité / Prescripciones de seguridad

D Achtung: Bei Eingriffen ins Gerät sind die Sicherheitsvorschriften nach VDE 701 (reparaturbezogen) bzw. VDE 0860 / IEC 65 (gerätebezogen) zu beachten!

VDE Bauteile nach IEC- bzw. VDE-Richtlinien! Im Ersatzfall nur Teile mit gleicher Spezifikation verwenden!

MOS - Vorschriften beim Umgang mit MOS - Bauteilen beachten!

GB Attention: Please observe the applicable safety requirements according to VDE 701 (concerning repairs) and VDE 0860 / IEC 65 (concerning type of product)!

VDE Components to IEC or VDE guidelines! Only use components with the same specifications for replacement!

Observe MOS components handling instructions when servicing!

I Attenzione: Osservare le corrispondenti prescrizioni di sicurezza VDE 701 (concernente servizio) e VDE 0860/IEC 65 (concernente il tipo di prodotto)!

VDE Componenti secondo le norme VDE risp. te IEC! In caso di sostituzione impiegare solo componenti con le stesse caratteristiche.

Osservare le relative prescrizioni durante, lavori con componenti MOS!

F Attention: Priere d'observer les prescriptions de sécurité VDE 701 (concernant les réparations) et VDE 0860 / IEC 65 (concernant le type de produit)!

VDE Composants répondant aux normes VDE ou IEC. Les remplacer uniquement par des composants ayant les mêmes spécifications.

Lors de la manipulation des circuits MOS, respecter les prescriptions MOS!

E Atención: Recomendamos las normas de seguridad VDE u otras normas equivalentes, por ejemplo: VDE 701 para reparaciones, VDE 0860 / IEC 65 para aparatos!

VDE Componentes que cumplen las normas VDE/IEC. En caso de sustitución, emplear componentes con idénticas especificaciones!

Durante la reparacion observar las normas sobre componentes MOS!

USA Attention: This set can only be operated from AC mains of 120 V/60 Hz. Also observe the information given on the rear of the set.

VDE CAUTION-for continued protection against risk of fire replace only with same type fuses!

CAUTION: To reduce the risk of electric shock, do not remove cover (or back), no user-serviceable parts inside, refer servicing to qualified service personnel. Observe MOS components handling instructions when servicing!

Sicherheitsbestimmungen

Prescriptions de Sécurité

Sicherheitsbestimmungen

Nach Servicearbeiten ist bei Geräten der Schutzklasse II die Messung des Isolationswiderstandes und des Ableitstromes bei eingeschaltetem Gerät nach VDE 0701 / Teil 200 bzw. der am Aufstellort geltenden Vorschrift, durchzuführen!

Dieses Gerät entspricht der Schutzklasse II, erkennbar durch das Symbol .

Messen des Isolationswiderstandes nach VDE 0701.

Isolationsmesser ($U_{\text{Test}} = 500 \text{ V}$) gleichzeitig an beiden Netzpolen und zwischen allen Gehäuse- oder Funktionsteilen (Antenne, Buchsen, Tasten, Zierteilen, Schrauben, usw.) aus Metall oder Metallegierungen anlegen. Fehlerfrei ist das Gerät bei einem:

$$R_{\text{Isol}} \geq 2 \text{ M}\Omega \text{ bei } U_{\text{Test}} = 500 \text{ V} \\ \text{Meßzeit: } \geq 1 \text{ s (Fig. 1)}$$

Anmerkung: Bei Geräten der Schutzklasse II kann durch Entladungswiderstände der Meßwert des Isolationswiderstandes konstruktionsbedingt $< 2 \text{ M}\Omega$ sein. In diesen Fällen ist die Ableitstrommessung maßgebend.

Empfehlungen für den Servicefall

- Nur Original - Ersatzteile verwenden.
Bei Bauteilen oder Baugruppen mit der Sicherheitskennzeichnung  sind Original - Ersatzteile zwingend notwendig.
- Auf Sollwert der Sicherungen achten.
- Zur Sicherheit beitragende Teile des Gerätes dürfen weder beschädigt noch offensichtlich ungeeignet sein.
- Dies gilt besonders für Isolierungen und Isolierteile.

- Netzteile und Anschlußleitungen sind auf äußere Mängel vor dem Anschluß zu prüfen. Isolation prüfen!
- Die Funktionsicherheit der Zugentlastung und von Biegeschutz-Tüllen ist zu prüfen.
- Thermisch belastete Lötstellen absaugen und neu löten.
- Belüftungen frei lassen.

GB

Safety Standard Compliance

After service work on a product conforming to the Safety Class II, the insulating resistance and the leakage current with the product switch on must be checked according to VDE 0701 or to the specification valid at the installation location!

This product conforms to the Safety Class II, as identified by the symbol .

- **Measurement of the Insulation Resistance to VDE 0701,**
Connect an Insulation Meter ($U_{Test} = 500 \text{ V}$) to both mains poles simultaneously and between all cabinet or functional parts (antenna, sockets, buttons, decorative parts, etc.) made from metal or metal alloy. The product is fault free if:

$$R_{Isol} \geq 2 \text{ M}\Omega \text{ at } U_{Test} = 500 \text{ V}$$

Measuring time: $\geq 1 \text{ s}$, (Fig. 1)

Comment: On product conforming to the Safety class II the Insulation Resistance can be $< 2 \text{ M}\Omega$, dependent contructively on discharge resistors. In this cases, the check of the leakage current is significant.

- **Measurement of the Leakage Current to VDE 0701.**

Connect the Leakage Current Meter ($U_{Test} = 220 \text{ V}$) to both mains poles simultaneously and between all cabinet or functional parts (antenna, sockets, buttons, screws, etc.) mad from metal or metal alloy. The product is fault free if:

$$I_{Leak} \leq 1 \text{ mA at } U_{Test} = 220 \text{ V}$$

Measuring time: $\geq 1 \text{ s}$, (Fig. 2)

- We recommend that the measurements are carried out using the METRATESTER 3. (Test equipment for checking electrical products to VDE 0701).

Metrawatt GmbH
Geschäftsstelle Bayern
Triestr. 44
D 8000 München 50

- If the safety of the product is not proved, because

- a repair and restoration is impossible
- or the request of the user is that the restoration is not to be carried out, the operator of the product must be warned of the danger by a written warning.

Recommendation for service repairs

- Use only original spare parts.

With components or assemblies accompanied with the Safety Symbol  only original-spare parts are strictly to be used.

- Use only original fuse value.

- Safety compliance, parts of the product must not be visually damaged or unsuitable. This is valid especially for insulators and insulating parts.

- Mains leads and connecting leads should be checked for external damage before connection. Check the insulation!

- The functional safety of the tension relief and bending protection bushes are to be checked:

- Thermally loaded solder pads are to be suck off and re-soldered.

- Ensure that the ventilation slots are not obstructed.

I

Norme di sicurezza

Successivamente ai lavori di riparazione, negli apparecchi della classe di protezione II occorre effettuare la misura della resistenza di isolamento e della corrente di dispersione quando l'apparecchio è acceso, secondo le norme VDE 0701 / parte 200 e rispettivamente le norme locali!

Questo apparecchio corrisponde alla classe di protezione II ed è riconoscibile dal simbolo .

- **Misura della resistenza di Isolamento secondo VDE 0701**

Applicare il misuratore di isolamento (tens. prova = 500 V) contemporaneamente ai due poli di rete e tra tutte le parti del mobile e delle funzioni (antenna, prese, tasti, mascherine, viti ecc.) in metallo o in lega metallica. L'apparecchio non presenta difetti quando:

$$R_{Isol} \geq 2 \text{ M}\Omega \text{ con tens. prova} = 500 \text{ V}$$

Tempo di misura: $\geq 1 \text{ s}$ (Fig. 1).

Nota: Negli apparecchi della classe II, che per motivi costruttivi dispongono di resistenze di dispersione, il valore di misura della resistenza di isolamento può essere inferiore a $< 2 \text{ M}\Omega$.
In questi casi è determinante la misura della corrente di dispersione.

- **Misura della corrente di dispersione secondo VDE 0701**

Applicare il misuratore di isolamento (tens. prova = 220 V) contemporaneamente ai due poli di rete e tra tutte le parti del mobile e delle funzioni (antenna, prese, tasti, mascherine, viti ecc.) in metallo o in lega metallica. L'apparecchio non presenta difetti quando:

$$I_{disp} \leq 1 \text{ mA con tens. prova} = 220 \text{ V}$$

Tempo di misura : $\geq 1 \text{ s}$ (Fig. 2)

- Si raccomanda di effettuare le misure con lo strumento METRATESTER 3 (strumento di misura per il controllo di apparecchi elettrici secondo VDE 0701).

Metrawatt GmbH
Geschäftsstelle Bayern
Triestr. 44
D 8000 München 50

- Se la sicurezza dell'apparecchio non è raggiunta, perché

- una riparazione non è possibile
- oppure è desiderio del cliente che una riparaz. non avvenga in questi casi si deve comunicare per iscritto all'utilizzat. la pericolosità dell'apparecchio riguardo il suo isolamento.

Raccomandazione per il servizio assistenza

- Impiegare solo componenti originali:

I componenti o i gruppi di componenti contraddistinti dall' indicaz.  devono assolutamente venir sostituiti con parti originali.

- Osservare il valore nominale dei fusibili.

- I componenti che concorrono alla sicurezza dell'apparecchio non possono essere né danneggiati né risultare visibilmente inadatti. Questo vale soprattutto per isolamenti e parti isolate.

- I cavi di rete e di collegamento vanno controllati prima dell'utilizzo affinché non presentino imperfezioni esteriori. Controllare l'isolamento.

- È necessario controllare la sicurezza dei fermacavi e delle guaine flessibili.

- Saldature caricate termicam. vanno rifatte.

- Lasciare libere le fessure di areazione.

Prescriptions de sécurité

Suite aux travaux de maintenance sur les appareils de la classe II, il convient de mesurer la résistance d'isolement et le courant de fuite sur l'appareil en état de marche, conformément à la norme VDE 0701 § 200, ou selon les prescriptions en vigueur sur le lieu de tonctionnement de l'appareil!

Cet appareil est conforme aux prescriptions de sécurité classe II, signalé par le symbole .

● Mesure de la resistance d'isolement selon VDE 0701

Brancher un appareil de mesure d'isolaton ($U_{test} = 500 \text{ V}$) simultanément sur les deux pôles secteur et entre toutes les parties métalliques ou métallisées accessibles de l'appareil (antenne, embases, touches, enjoliveurs, vis, etc.).

Le tonctionnement est correct lorsque:

$$R_{isol} \geq 2 \text{ M}\Omega \text{ pour une } U_{test} : 500\text{V}$$

Durée de la mesure: $\geq 1 \text{ s}$

Observations: L'isolation des appareils de la classe II, de part leur conception (résistance de décharge), peut être intérieur à $< 2 \text{ M}\Omega$, (Fig. 1).

● Mesure du courant de fuite selon VDE 0701

Brancher un ampèremètre du courant de fuite ($U_{test} = 220\text{V}\approx$) simultanément sur les deux pôles du secteur et entre toutes les parties métalliques ou métallisées accessibles de l'appareil (antenne, embases, touches, enjoliveurs, vis, etc.). Le tinctionnement est correct lorsque (Fig. 2):

$$I_{fuite} \leq 1 \text{ mA pour } U_{test} : 200 \text{ V}\approx$$

Durée de la mesure $\geq 1 \text{ s}$.

DISPOSICIONES PARA LA SEGURIDAD

Después de operaciones de servicio en aparatos de la clase de protección II, se llevará a cabo la medida de la resistencia de aislamiento y de la corriente derivada, con el aparato conectado, de acuerdo con VDE 0701 o de las disposiciones vigentes en el lugar de instalación.

Este aparato corresponde a la clase de protección II, reconocible por el símbolo .

● Medida de la resistencia de aislamiento según VDE 0701.

Aplicar el medidor de aislamiento ($U_{prueba} = 500 \text{ V}$), simultáneamente, a los dos polos de red y entre todas las partes del mueble o de funciones (antena, conectores, teclas, tornillos, etc.) de metal o aleaciones metálicas. El aparato estará libre de defectos con:

$$R_{aisl} \geq 2 \text{ M}\Omega \text{ con } U_{prueba} = 500 \text{ V}$$

Tiempo de medida $\geq 1 \text{ seg.}$

Observación: En aparatos de la clase de protección II, condicionado por la construcción y por resistencias de descarga, el valor de medida de la resistencia de aislamiento puede ser superior a $< 2 \text{ M}\Omega$. En este caso es decisiva la medida de la corriente derivada (Fig.1).

● Medida de la corriente derivada de acuerdo con VDE 0701.

Aplicar el medidor de corriente derivada ($U_{prueba} = 220 \text{ V}$) simultáneamente a los dos polos de red y entre todas las partes del mueble o de funciones (antena, conectores, teclas, tornillos, etc.) de metal o aleaciones metálicas. El aparato estará libre de defectos con (Fig.2):

$$I_{deriv} \leq 1 \text{ mA con } U_{prueba} = 220 \text{ V}$$

Tiempo de medida $\geq 1 \text{ seg.}$

- Pour ces mesures, nous préconisons l'utilisation du METRATESTER 3 (instrument de mesure pour le contrôle d'appareils électriques conformes à la norme VDE 0701).

METRAWATTWATT GmbH
Geschäftsstelle Bayern
Triebstr. 44
D 8000 München 50

- Dans le cas où la sécurité de l'appareil n'est pas assurée pour les raisons suivantes:

- la remise en état est impossible
- l'utilisateur ne souhaite pas la remise en état de l'appareil. L'utilisateur doit être informé par écrit du danger que représente l'utilisation de l'appareil.

Recommandations pour la maintenance

- Utiliser exclusivement des pièces de rechange d'origine. Les composants et ensembles de composants signalés par le symbole  doivent être impérativement remplacés par des pièces d'origine.
- Respecter la valeur nominale des fusibles.
- Veiller au bon état et la conformité des pièces contribuant à la sécurité de tonctionnement de l'appareil. Ceci s'applique particulièrement aux isolements et pièces isolantes.
- Vérifier le bon état extérieur des câbles secteur et des câbles de raccordement au point de vue isolement avant la mise sous tension.
- Vérifier le bon état des protections de gaine.
- Nettoyer les soudures avant de les renouveler.
- Dégager les voies d'aération.

- Aconsejamos llevar a cabo las medidas con el METRATESTER 3 (Instrumento de medida para la comprobación de aparatos eléctricos según VDE 0701).

METRAWATT GmbH
Geschäftsstelle Bayern
Triebstr. 44
D 8000 München 50

- Si no se cumple la seguridad del aparato, porque
 - la puesta en orden es imposible, o
 - existe el deseo del usuario de no realizarla, se ha de comunicar a quien lo haga funcionar, por escrito, del peligro dimanante del aparato.

Recomendaciones para caso de servicio

- Emplear sólo componentes originales.

Con componentes o grupos constructivos con el indicativo de seguridad  son de obligada necesidad piezas de repuesto originales.

- Las partes del aparato que contribuyan a la seguridad del mismo no deben estar deterioradas ni ser manifiestamente inadecuadas.
- Esto es especialmente válido para aislamientos o piezas aislantes.
- Los cables de red y de conexión se comprobarán, antes de conectarlos, en cuanto a defectos externos. Comprobar el aislamiento.
- Se ha de comprobar la función de seguridad de la compensación de tiro o de los manguios de protección contra doblamientos.
- Repasar los puntos de soldadura sometidos a carga térmica.
- Mantener libres los canales aireación.

Safety Instructions

A The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage", within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

A The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

This product was designed and manufactured to meet strict quality and safety standards. There are, however, some installation and operation precautions which you should be particularly aware of.

- Read Instructions - All the safety and operating instructions should be read before the appliance is operated.
- Retain Instructions - The safety and operating instructions should be retained for future reference.
- Heed Warnings - All warnings on the appliance and in the operating instructions should be adhered to.
- Follow Instructions - All operating and use instructions should be followed.
- Water and Moisture - The appliance should not be used near water-for example, near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement, or near a swimming pool, and the like.
- Wall or Ceiling Mounting - The appliance should be mounted to wall or ceiling only as recommended by the manufacturer.
- Ventilation - The appliance should be situated so that its location or position does not interfere with its proper ventilation. For example, the appliance should not be situated on a bed, sofa, rug, or similar surface that may block the ventilation openings; or, placed in a built - in installation, such as a bookcase or cabinet that may impede the flow of air through the ventilation openings.
- Heat - The appliance should be situated away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.

● Power Sources - The appliance should be connected to a power supply only of the type given above or as marked on the appliance.

● Power-Cord Protection - Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the appliance.

● Cleaning - The appliance should be cleaned only as recommended by the manufacturer.

● Power Lines - An outdoor antenna should be located away from power lines.

x1 ● Outdoor Antenna Grounding - If an outside antenna is connected to the receiver, be sure the antenna system is grounded so as to provide some protection against voltage surges and built up static charges. Section 810 of the National Electrical Code, ANSI / NFPA No. 70-1984, provides information with respect to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna discharge unit, size of grounding conductors, location of antenna discharge unit, connection to grounding electrodes, and requirements for the grounding electrode.

● Nonuse Periods - The power cord of the appliance should be unplugged from the outlet when left unused for a long period of time.

● Object and Liquid Entry - Care should be taken so that objects do not fall and liquids are not spilled into the enclosure through openings.

● Damage Requiring Service - The appliance should be serviced by qualified service personnel when: The power-supply cord or the plug has been damaged; or objects have fallen, or liquid has been spilled into the appliance; or the appliance has been exposed to rain; or the appliance does not appear to operate normally or exhibits a marked change in performance; or the appliance has been dropped, or the enclosure damaged; or the batteries have been damaged.

● Servicing - the user should not attempt to service the appliance beyond that described in the operating instructions. All other servicing should be referred to qualified service personnel.

Points x1 and x2 apply only to receivers or tuners.
